

HIAB BODYWORKS

GET THE BODY YOU'VE ALWAYS DREAMED OF!

HIAB BODYWORKS TAKE LOADER BODIES TO THE NEXT LEVEL

Now, all body builders, installers and end customers can get the loader body they've always dreamed of. Our core concept is straightforward and modular. You take one of our three standard packages then simply select the options and accessories you need. It's the quickest and most cost-effective way to get the solution that's right for your vehicles and applications.

SPEED, SIMPLICITY AND SAFETY

Our pre-manufactured modules make installation a breeze – around two weeks compared with up to eight weeks for a traditional loader body. That 75% time saving means your vehicles are ready for use up to six weeks sooner.

The bolted modular construction is 100% weld-free, so parts are easy to remove and replace. That means big savings on labour and maintenance time. What's more, our combination of well thought-out standard configurations plus easily interchangeable modules, options and accessories gives you total flexibility. With Hiab BodyWorks, the precise customization you've always wanted is now an affordable reality.

DESIGNED AND INSTALLED TO PERFORM

Installation is carried out by specialists at our facility in Meppel, the Netherlands, by experts who know the product inside-out and can guarantee a finished assembly that performs as it should.

Since Hiab BodyWorks can be up to 20% lighter than any other loader body currently available, you can carry the same payload more economically. It's a win for your bottom line, and a win for the environment, too.

To ensure a long working life, Hiab BodyWorks are treated with our unique nDurance anti-corrosion coating – an advanced nanotechnology paint process that provides the industry's toughest protection in all weathers.

- Save 75% on installation time
- Easy maintenance and repairs
- Customization options
- Professional installation
- Up to 20% lighter lets you increase payloads
- Long service life

HOW TO GET THAT PERFECT BODY

Our BodyWorks concept is based on three key modules: **headboard**, **wheel arch module** and **rear section** – and we offer a range of options for each one.

1. HEADBOARD

The mandatory headboard protects the cabin and crane. You can choose from several heights as well as a host of optional fittings.

2. WHEEL ARCH MODULE

The wheel arch module is needed in around 90% of cases, depending on the truck configuration. Options include stainless steel mudguards.

3. REAR SECTION

The mandatory rear section is where the light carrier and underrun bar are fitted. Options include additional working lights and toolboxes.

Each body also requires other mandatory parts, which are available in various sizes and materials:

- Side rails
- Cross members
- Lashing points
- Floor

Options and accessories include:

- Toolboxes
- Mudguards/steps
- Drop sides
- Working lights
- Wide load signs

STANDARD CONFIGURATIONS

We offer three BodyWorks packages: **Basic**, **Basic+** and **High-end**. You can use any of them as the starting point for customization to your loading needs and local requirements.

BODYWORKS BASIC

- Headboard module
- Wheel arch module
- Rear section
- Working lights
- Simple flooring option (wood)
- Standard toolboxes

BODYWORKS BASIC+

is the same as our Basic model plus:

- Standard flooring, wood combined with steel above the rear axles
- Multiple toolboxes
- Additional lashing points
- Side rave continues to the cabin
- Stainless steel plating

BODYWORKS HIGH-END

is as Basic+, but with additional pocket storage, and options including:

- Toolbox on top of headboard with working lights, supports for a spreader and ball coupling for a trailer
- Wide load signs
- Stainless steel plating in front of fuel tank
- Step or toolbox between rear axles
- Stainless steel plating

BUILT TO PERFORM

Hiab is the world's leading provider of on-road load handling equipment, intelligent services, smart and connected solutions.
