

Experience new levels of comfort and productivity with **the PANORAMA cabin**

The new cabin for LOGLIFT welcomes crane operators to a comfortable and climate-controlled way of working with a panoramic view of the work area. Here are three good reasons why it will make your crane operation more productive and profitable.

See more. Do more

The PANORAMA cabin offers market leading visibility with clear views in all directions. The front window height has been increased, providing the operator with an ideal view for loading high piles of timber.

Welcome to take a seat

The seat ergonomics have been enhanced with improved neck rest to fully support the operator. To make operations comfortable all year round, the cabin features better insulation and a refined heating and cooling system to keep it warm during cold days, and cool when the temperature rises.

Silence please...

The PANORAMA cabin has felt interior lining that creates pleasant acoustics and double glazing on the side windows to give the operator a quiet working environment.
