

MULTILIFT

DEMOUNTABLES BUILT TO PERFORM

DESIGNED BUSINESS

You stay competitive with MULTILIFT demountables from Hiab. No matter if you move bulky materials, high-volume waste, gravel, metal scrap or containerised equipment. MULTILIFT hooklifts and skiploaders provide market-leading productivity and reliability, giving you the edge over load handling challenges.

Payload equals profit

The lower a vehicle's deadweight, the more profitably it carries on its load. You want the most capacity you can get for the weight, which is exactly what MULTILIFT demountables deliver.

Best of all, they do it without sacrificing stability or control. Besides high strength for the weight, you get the balance, speed, flexibility and smooth operation to manage the toughest of tasks, without compromising safety or quality.

On the move every day

You have to deliver, day in and day out. And you can depend on MULTILIFT demountables to do the same. The sturdy construction of high tensile steel and top performing cylinders are just two examples of our high quality construction - this means your MULTILIFT will never let you down. Anything requiring attention is within easy reach, because neither routine nor preventive maintenance should take a moment longer than necessary. We deliver the quality and service you depend on.

Energy to spare

Easy to use, MULTILIFT demountables let operators save their energy. But they also use less energy in total. It starts with the high ratio of capacity to weight, which means less fuel burned and less CO₂.

The Pro Future™ concept goes even further. In addition to low weight, Pro Future™ has smart features that speed up operation and shorten standstills. With up to 30% less fuel consumption for a typical operator this means lowered costs and a lessened impact on the environment.

TO KEEP ROLLING

REAL SOLUTIONS TO REAL CHALLENGES

MULTILIFT demountables offer a range of skiploaders that are suitable for all your needs. In addition our wide hooklift range spans from the XR Light Range, which can handle 2–7 tonnes, to our XR Power and XP Classic Ranges, which handles up to 30 tonnes. Add smart control systems and a wide variety of options – along with outstanding services – and you have adaptable and durable solutions built to perform. We can assist you at every step, from analysing requirements to selecting and supporting your solution.

Built to perform

It makes no difference if you operate in building and construction, waste and recycling, or any other industry. MULTILIFT demountables are up to any challenge you may face, providing the tools you need to efficiently and productively deliver. There is a MULTILIFT solution to meet your needs, whether you operate only one truck or oversee an entire fleet.

Optimised for your needs

Perhaps you want to increase the scope of the containers you can handle. Maybe you want to tip them faster or change demountable bodies more quickly between jobs. Possibly you want to limit noise – and certainly fuel consumption. Whatever your priorities, there is MULTILIFT technology to match.

Durability is assured

The ruggedness of your MULTILIFT demountable is ensured through:

- Design and performance that exceeds industry standards
- Strict control of the supply chain
- Top-quality materials and production processes
- Extensive testing in both lab and field

Load handling your way

The MULTILIFT product range covers all types of load handling requirements – and offers functions and options to suit all preferences. You do your job as you see fit: big loads or small, on-road or off-road, manually or automatically.

Always under control

MULTILIFT demountables are available with different types of control systems. Tried-and-true pneumatic controls put reliable precision in the operator's hands. Other systems combine electronic control with a state-of-the-art PLC (Programmable Logic Controls).

Support from start to finish

When you invest in a MULTILIFT demountable, you not only invest in the industry's best people, you also invest in the best performance, quality and service available. We guide you through your product's features and functions, so that you can be productive from day one. And we provide unmatched support throughout its lifetime, your equipment will continue to perform for as long as you own it, giving you an excellent return on your investment.

Reduced costs and emissions with the Pro Future concept

The Pro Future™ is several hundred kilograms lighter than comparable products. It offers increased payload, faster operations and shorter standstills, with lower fuel consumption and CO₂ emissions as a result.

Speed, fuel economy and ease of use can be optimised with unique MULTILIFT performance functions:

- Fast Lowering
- Fast Speed
- Fast Tipping
- Friction Relief
- Automatic Sequence Control

IN THE DRIVER'S SEAT

MULTILIFT demountables put your mind at rest and your body at ease. Key features ensure safety in all operations, while smooth and precise controls allow trouble-free handling of the load at maximum performance. Comfort is also a priority, whether operating the equipment or behind the wheel.

Putting safety first

Safety is the number-one priority with any MULTILIFT product – both for the operator and for those nearby. Low installation height and a low centre of gravity provide outstanding stability when loading, unloading or tipping the demountable body. In addition there are audible and visible warnings, automatic latches, safety interlocks and stabilisers.

Get the right touch

From the simple to the sophisticated, MULTILIFT control systems put you in charge. The proportional movements of our pneumatic controls give you all the precision, accuracy and speed needed to guide the load. Many models are also steered by a PLC (Programmable Logic Controls). The latter offer one-of-a-kind simplicity by automating daily tasks in demountable body handling.

Lightening the burden

Comfort goes hand in hand with safety and control. Responsive and ergonomic controls make MULTILIFT demountables easier to work with.

Built for the road

The right demountable makes a difference on the job, but also in getting to and from it. MULTILIFT body-locking devices ensure driving stability, while floating main cylinders maintain the truck's natural flexibility for a comfortable ride. Both are important when much of your day is spent behind the wheel.

Second Generation Cab Controller

The Second-Generation Cab Controller is central to the Second-Generation Control System of our MULTILIFT XR Power and XR Low-Built ranges. Its highly responsive, multiple-position joystick allows one-finger control of all functions, ensuring a safe, easy and fast operation. Plus there are options like Friction Relief, which gives you smoother and quieter operation. Automatic Sequence Control can even do some of the work for you, by loading or unloading with just one control movement.

“First and foremost, we have to keep our promises to our customers.”

*Håkan Lundin
H Lundin Entreprenad AB*

ON THE **BOTTOM** LINE

MULTILIFT demountables are designed for a long life at maximum efficiency. Their durable construction means high productivity, with more time in operation and less time being serviced. In the end, you have a demountable with the market's best residual value.

Rugged and ready

MULTILIFT demountables are built for uninterrupted work, with high-tensile steel, single castings in critical areas, high quality cylinders, reliable seals and protective covers that resist weather and impact. Each demountable undergoes a rigorous series of laboratory and field trials, and key components are independently tested to reduce fatigue.

More from every trip

MULTILIFT demountables are designed for high returns. With an excellent ratio of capacity to weight, they offer you a maximal payload per trip. Add precise control and a range of features that speed up individual operations, and you have true workhorses that use less fuel and bring in more money by the hour.

Measurable savings

The savings with MULTILIFT are easy to see, especially when using Pro Future™. With its superior capacity, ultra-low weight and smart functions, the XR18S – Pro Future™ consumes around 30% less fuel when used by the average operator. At 10 hooklift operations per day and a driving distance of 100,000 km per year, that saves EUR 10,000 over eight years.

A lasting investment

All this efficiency comes without sacrificing lifetime or serviceability. MULTILIFT products are durably built, easy to care for and supported by a wide service network, which means they retain their worth and provide a consistently high resale value.

From the first job to the last, MULTILIFT solutions deliver.

“Uptime is important to us.
MULTILIFT just makes us more efficient.”

*John Gosling
TJ Waste & Recycling Limited*

MAKING SURE YOU STAY ON THE MOVE

Choosing MULTILIFT is more than a choice of world-class engineering. It is also a choice of world-class service and support from Hiab. Our commitment to quality and reliability applies not only to MULTILIFT demountables, but also to parts, services and preventive maintenance.

From parts to people

Original spare and wear parts of the highest quality ensure that your MULTILIFT product stays a MULTILIFT product. In other words, they give you the same functionality, performance and safety you chose from the start.

The parts – and much more – are quickly made available to you through the largest service network in the industry. No matter where you are, you are never far away from Hiab skills and expertise. And like our MULTILIFT products, our people work harder and go farther for you.

Your time is vital

MULTILIFT products are designed to keep you self-sufficient. Key parts and components that require regular attention are located where you would expect them, and where they are easy to get at. Neither routine nor preventive maintenance should take a moment longer than necessary.

When more is required, fully trained and accredited Hiab service personnel know all there is to know about your MULTILIFT product. Above all, they know the importance of servicing or repairing it as quickly as possible. They get your product back in business and making a profit, with downtime kept to a minimum.

Total peace of mind

The best combination is predictable operation with predictable costs. Hiab's preventive maintenance programmes and service contracts are a cost-effective way to keep your MULTILIFT demountable at full productivity. Tailored to your business, they protect the service you deliver to your customers.

Hiab and MULTILIFT quality and service is as dependable and reliable as our equipment, always there to support you in realising your goals.

ALWAYS A MULTILIFT FOR YOUR NEEDS

The first MULTILIFT demountable was delivered in the year 1949. Today there are effective MULTILIFT demountables for almost every imaginable task. They include not only the demountables shown here, but also specialised solutions developed for specific areas and applications. In addition, MULTILIFT leads the way when it comes to reducing lead times from hooklift order to finished product and delivery. Our pioneering bolt-on concept in XR and XP hooklift ranges save valuable time throughout the process. This means the total chain from factory to you is greatly reduced and you can get to work much faster.

XR Light range

The hooklifts of our modular XR Light range represent a major breakthrough in demountable technology. The range's pioneering, user-oriented concept is based on a sliding hook mechanism, an innovative single-plate subframe and ingenious lifting frame designs. The result is a product that delivers outstanding performance with fast and easy body loading/unloading functions. High quality top-coat painting at our factory is standard for all MULTILIFT XR and XP models.

Model	Lifting/tipping capacity	Gross vehicle weight*
MULTILIFT XR2S	2 t	3.5 t
MULTILIFT XR3S	3 t	4.5 t
MULTILIFT XR5S	5 t	7.5 t
MULTILIFT XR7S	7 t	10/12 t

* There can be local variances from the reference gross vehicle weight.

XR Medium range

The hooklifts of our XR Medium range are power packages in their own right. Their exceptional capacity-to-weight ratio enables larger payloads, enhances the vehicle's versatility and maximises its usage. Safety features include load-holding valves directly on the cylinders and a tipping lock mechanism. High quality top-coat painting at our factory is standard for all MULTILIFT XR and XP models.

Model	Max lifting capacity, net	Gross vehicle weight*
MULTILIFT XR8S	8 t	12/14 t
MULTILIFT XR10S	10 t	15 t

* There can be local variances from the reference gross vehicle weight.

XR Power range

What gives the hooklifts of our XR Power range true versatility – and makes them expert solutions for all demountable operations – is a state-of-the-art control system operated with a PLC (Programmable Logic Controls). The PLC steers the hooklift's functions and offers a unique combination of automatic and manual control.

The XR Power range is available in a number of models (T, S and Z) with different functions, as well as MULTILIFT XR Power Range offers revolutionary options, such as automatic sequence control, fast tipping and speed, and friction relief for frictionless body change. All options can be chosen independently to match your precise requirements, while high strength combined with low weight maximises the payload potential of the vehicle. High quality top-coat painting at our factory is standard for all MULTILIFT XR and XP models.

XR Low-Built range

Safety of operation and ease of use are two of the most important features of the hooklifts in our XR Low-Built range. With their low centre of gravity, lower loading angles and 195 mm installation height, these hooklifts are the ultimate solution for stability and driving comfort. The lower installation height also means taller demountable bodies can be carried, which maximises payload volume and increases profit potential. High quality top-coat painting at our factory is standard for all MULTILIFT XR and XP models.

MULTILIFT XR24ZL	24 t	32 t

* There can be local variances from the reference gross vehicle weight.

XP Classic hooklifts have a low weight, low installation height and high operating speed. Their optimised construction guarantees a high net payload, as well as fast tipping and body change. High quality top-coat painting at our factory is standard for all MULTILIFT XR and XP models.

XP Classic range

MULTILIFT XP30S	30 t	32/41 t

Certain models are intended for specific regions.
 * There can be local variances from the reference gross vehicle weight.

Skiploaders

MULTILIFT skiploaders are designed for short turnaround times in skip handling operations. The MULTILIFT skiploaders have a unique 'swan neck' design, which allows them to pick up containers from adverse angles, such as horizontally with no lifting angle, as well as lift them over obstacles such as fences. Because they can operate in small spaces and are compatible with shorter containers, the skiploaders are ideally suited to urban work.

Model	Lifting/tipping capacity	Gross vehicle weight*
MULTILIFT SLT142	14 t	18/19 t
MULTILIFT SLF142	14 t	18/19 t
MULTILIFT SLT192	19 t	25/26 t

* There can be local variances from the reference gross vehicle weight.

BUILT TO PERFORM

Hiab is the world's leading provider of on-road load handling equipment. Customer satisfaction is the first priority for us. Hiab's product range includes HIAB loader cranes, JONSERED recycling and forestry cranes, LOGLIFT forestry cranes, MOFFETT truck mounted forklifts and MULTILIFT demountables, as well as DEL, WALTCO and ZEPRO tail lifts.
