

HIAB X-CL

LOAD HANDLING THE EASY WAY

The perfect tool for a range of load handling assignments. Easy to operate and versatile. Once installed on your truck, all it takes is a single operator. A Hiab X-CL crane represents a sound investment.

A sound investment

Businesses often devote too much time and resources to handling loads. Some companies use manual labour to get the job done, even though this requires a larger workforce, and may not be done in a safe working environment. Others seek help from a third party, only to find themselves having to wait impatiently for a slot in the schedule. We say it is better to manage these jobs yourself. If load handling is part of your business, come and see us and we'll tell you more about our range of Hiab X-CL cranes.

An effective solution

Lift, move and deliver machines, building materials, tools, big-bags or similar by hook and sling – or efficiently handle loads on pallets with a pallet fork attached to the tip of the crane. All it takes is one man, one truck and one Hiab X-CL crane to do the lot – an effective solution requiring no extra personnel or additional load handling equipment, such as conveyor belts or forklifts. An X-CL crane is a valuable investment for our customers active across various market sectors, including rental companies, municipal departments and the building and construction industry, among others.

**A VALUABLE INVESTMENT.
STRAIGHTFORWARD OPERATION.
PERFECT FOR HANDLING LOADS.**

X-CL HALLMARKS

Lightweight and foldable, X-CL cranes are perfect for all types of load handling operations by hook and pallet fork – leaving plenty of room for the payload on the truck bed.

Straightforward one-man operation

An X-CL crane is user-friendly and easy to operate. Its intuitive operation is a huge benefit, especially if the crane is to be operated by different people and/or inexperienced drivers. As standard, the crane is manually operated via side controls located on either side of the truck, as Hiab's unique solution provides the same lever sequence on both sides. This makes load handling safer and more efficient, allowing you to confidently operate the crane from the side with the best overview, at all times. Optionally, a radio remote control system is available, making operation even more comfortable and straightforward.

Easy to service and maintain

Hiab X-CL cranes feature Hiab's classic crane design, utilising cutting edge materials and technologies. Our cranes offer basic, versatile functionality to facilitate your day-to-day work. The Hiab X-CL crane is also very easy to service and maintain, even for local workshops that might not yet have had the pleasure of working with a Hiab crane. To minimise downtime, all key parts and components requiring regular checks and maintenance are located exactly where you would expect them, ensuring easy access.

Durable parts and accessible spares

Hiab quality is renowned worldwide, and we only use original Hiab parts in our Hiab X-CL cranes. Our large service network can assist you with original, high quality spare parts when the time comes. However, if for any reason you prefer to use commercial and locally available parts, you may of course do so.

Maximised payload

Your Hiab crane is manufactured using premium quality high-tensile steel. Allied with the optimised design of structural parts such as shafts, links and cylinders, this gives your crane the structural strength to deliver heavy loads, year after year. It also results in considerable weight savings – the lighter your crane, the bigger the load you can carry on your truck. So don't be fooled by the slender appearance of the Hiab X-CL – the crane is both robust and light at the same time.

YOUR **LATEST** X-CL CRANES

X-CL 8

The Hiab X-CL 8 fits on almost any kind of truck. Outreach with the one standard extension is 5.4 metres where it lifts close to 1.5 tonnes. A kit for mounting a second and third extension is also available. The crane can also be fitted with a remote control.
